Repository Information

Repository's URL: <https://github.com/Spiph/WebAppDev>

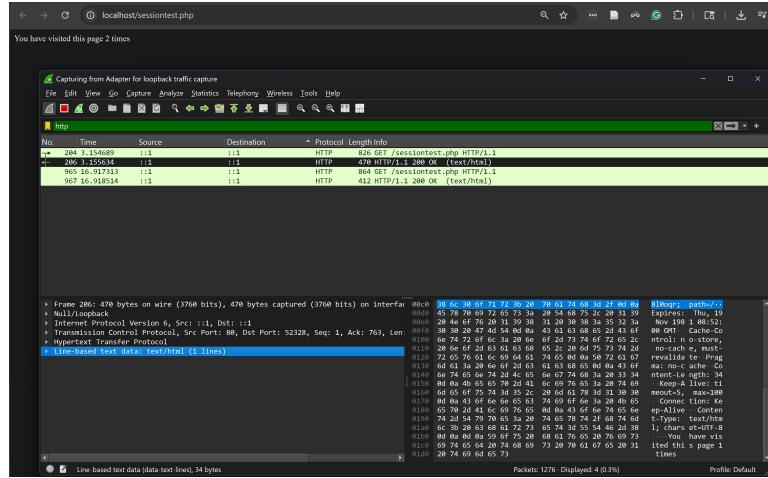

This is a public repository for Ian Cannon to store all code from the course. The organization of this repository is as follows.

Lab 4

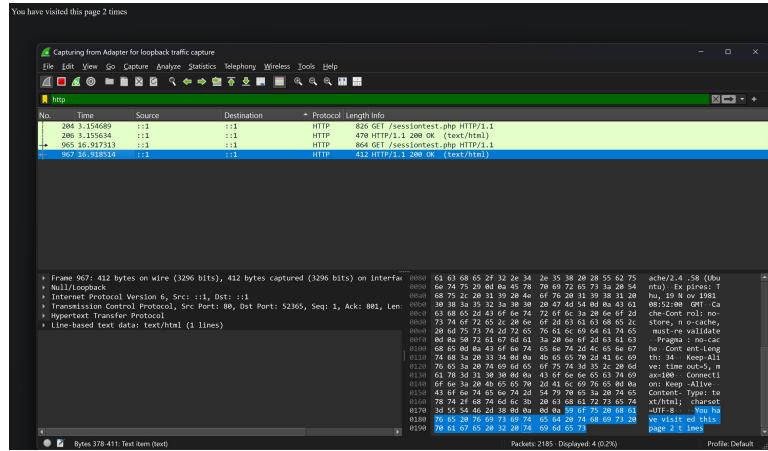

Task 1: Understanding Session Management in a PHP Web Application

1.a. Deploy and test sessiontest.php

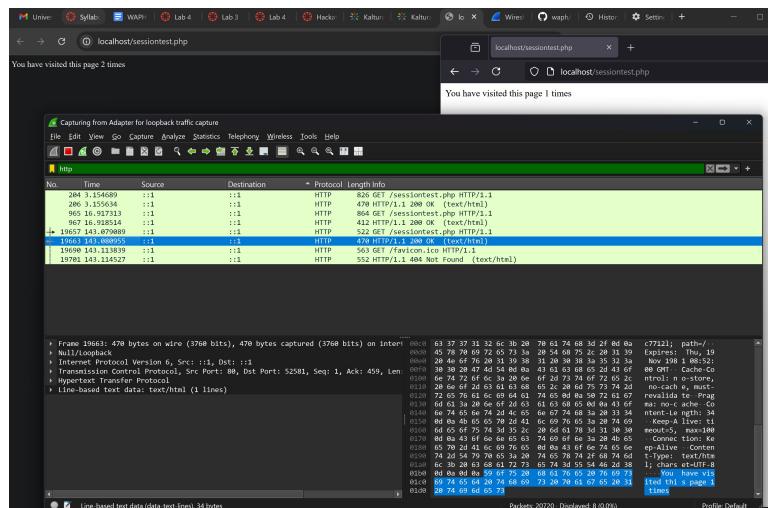

This shows my session is working

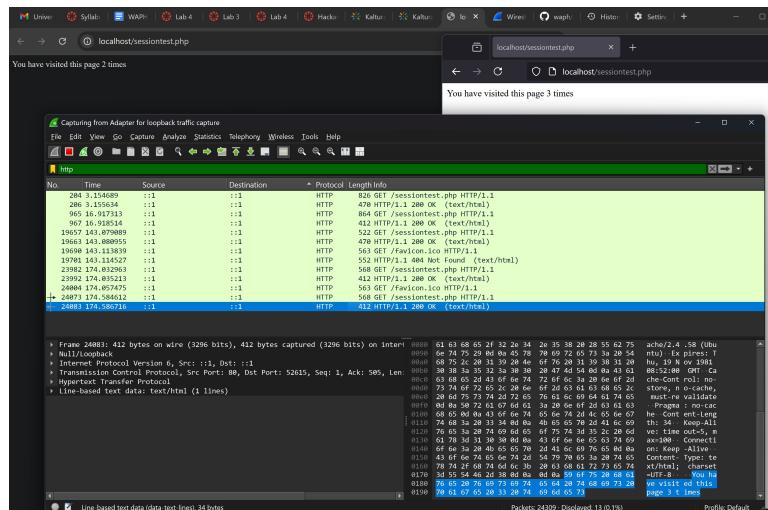

First Visit

Visited Twice

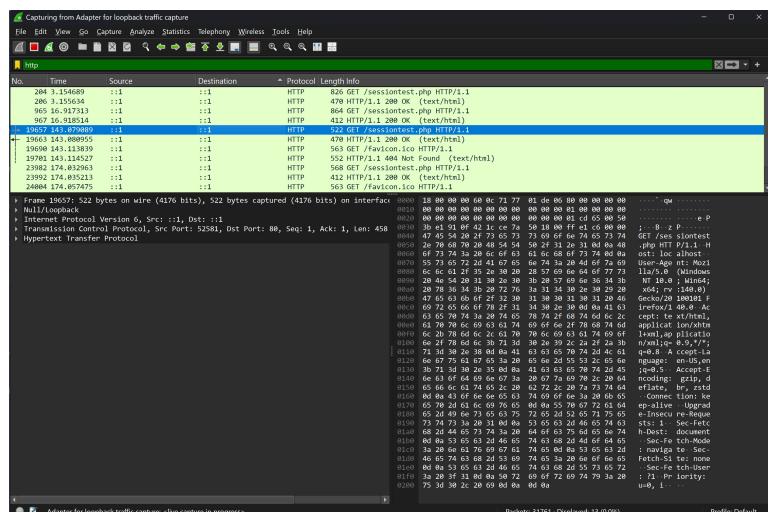

First Time on Firefox

Up to 3 on Firefox

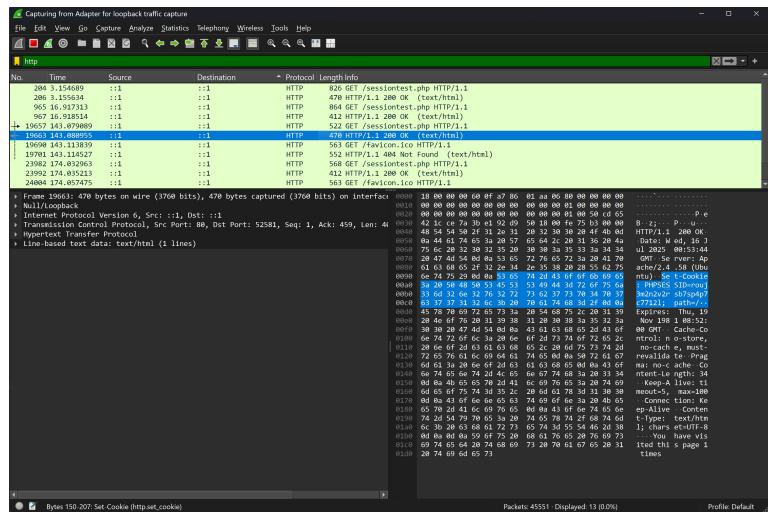

1.b. Observe the Session-Handshaking using Wireshark (6 pts)

Here is the first session on Firefox:

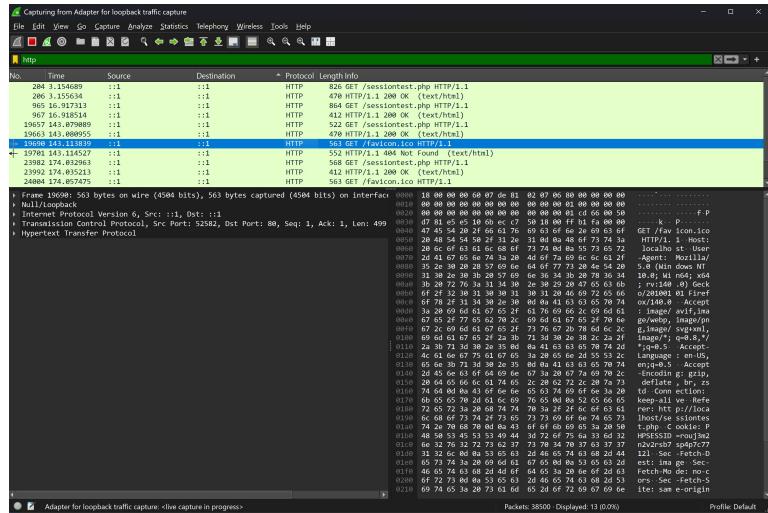

firefox first session

The response assigns an id for the cookie, PHPSESSID:

Mmmmm Cookies

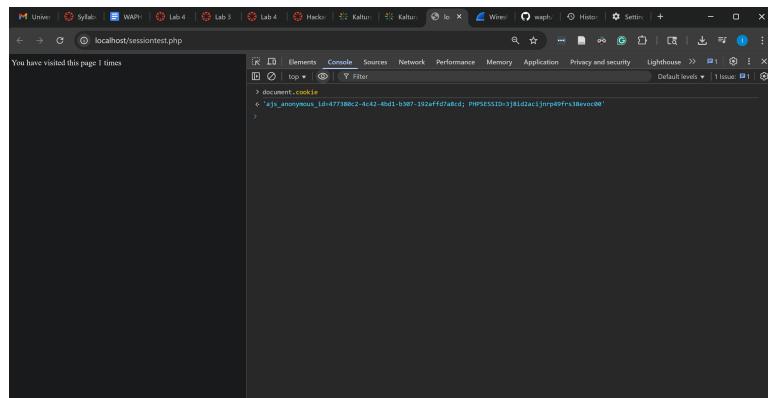

You can see the second GET request now has a cookie:

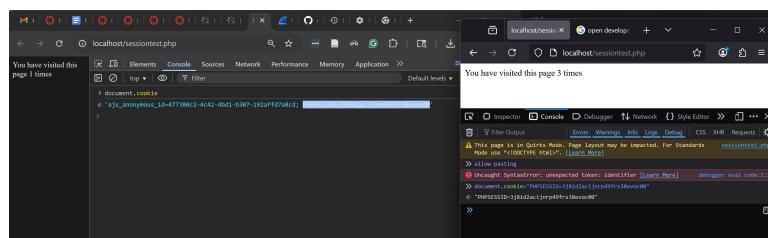

Cookie Use

You can see the server recognizes the session and replies without setting a new cookie

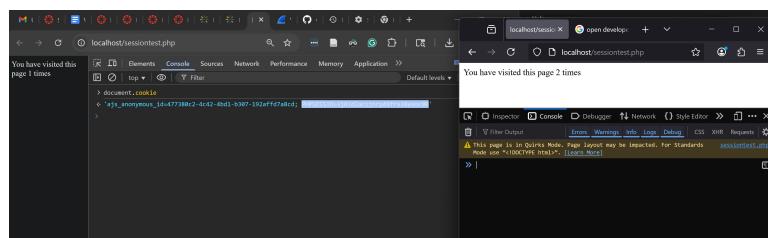

1.c. Understanding Session Hijacking (2 pts)

Chrome Cookie

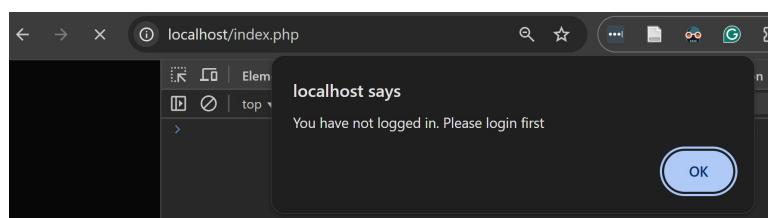

before refresh

after refresh (it decremented to the chrome cookie)

Task 2: Insecure Session Authentication

2.a. Revised Login System with Session Management (10 pts)

login required (chrome)

```

DEBUG>sql= SELECT * FROM
users WHERE username='admin'
AND password = md5('pass')

Welcome admin!

Logout // if
($_SERVER['REQUEST_METHOD']
== 'POST') // Note: The
username from POST is not
sanitized, which is part of the
vulnerability. // if
(cheklogin mysql($_POST['username'],
$_POST['password'])) // // The
output here is also unsanitized,
making it vulnerable to XSS. // echo
"Welcome" .
$_POST['username'] . " "; // } else
{ // echo "Invalid
username/password"; // } // } else {
// include 'form.php'; // }

```

grab the cookie

```

DEBUG>sql= SELECT * FROM
users WHERE username='admin'
AND password = md5('pass')

Welcome admin!

Logout // if
($_SERVER['REQUEST_METHOD']
== 'POST') // Note: The
username from POST is not
sanitized, which is part of the
vulnerability. // if
(cheklogin mysql($_POST['username'],
$_POST['password'])) // // The
output here is also unsanitized,
making it vulnerable to XSS. // echo
"Welcome" .
$_POST['username'] . " "; // } else
{ // echo "Invalid
username/password"; // } // } else {
// include 'form.php'; // }

```

You have not logged in. Please log in first.

login required (firefox)

```

Welcome admin!

Logout // if
($_SERVER['REQUEST_METHOD']
== 'POST') // Note: The
username from POST is not
sanitized, which is part of the
vulnerability. // if
(cheklogin mysql($_POST['username'],
$_POST['password'])) // // The
output here is also unsanitized,
making it vulnerable to XSS. // echo
"Welcome" .
$_POST['username'] . " "; // } else
{ // echo "Invalid
username/password"; // } // } else {
// include 'form.php'; // }

```

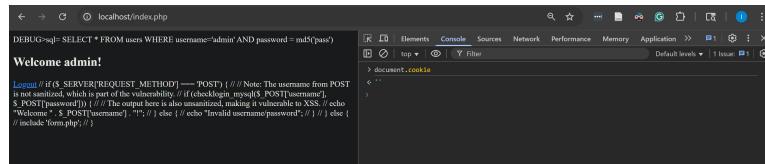

Welcome admin!

Access granted (firefox without signin)

Task 3

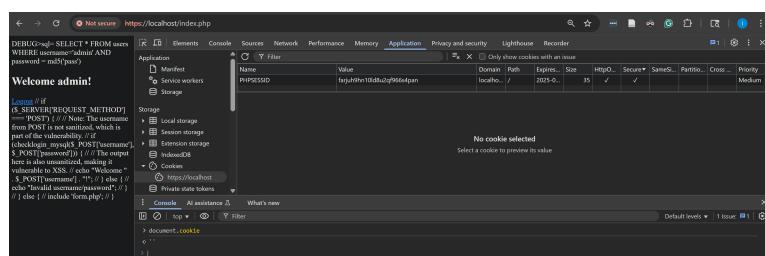

3.a. Data Protection and HTTPS Setup (10 pts)

make some certs

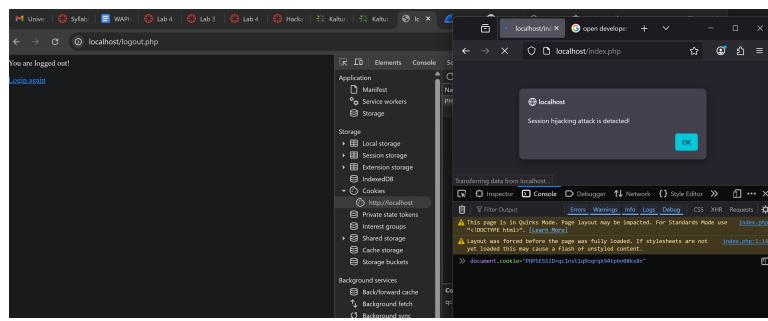

No cookies :(

3, h.

so secure

3.c.

caught ya!
